

Fix case: opening another file discarded the current draft

A controlled reproduction against PDF Desk itself. This documents corrected historical behavior, not a customer complaint or loss. Captures show the actual Korean workbench used in the test.

Environment

Windows 10.0.26300 x64 / Chrome 155.0.8059.80 / 1440×1000 / automated headless browser.
2026-10-24, 1 baseline attempt on each of 3 paths. Source b55ed90de177 → 53d304c11608.
Exact run times and hashes: public observation JSON.

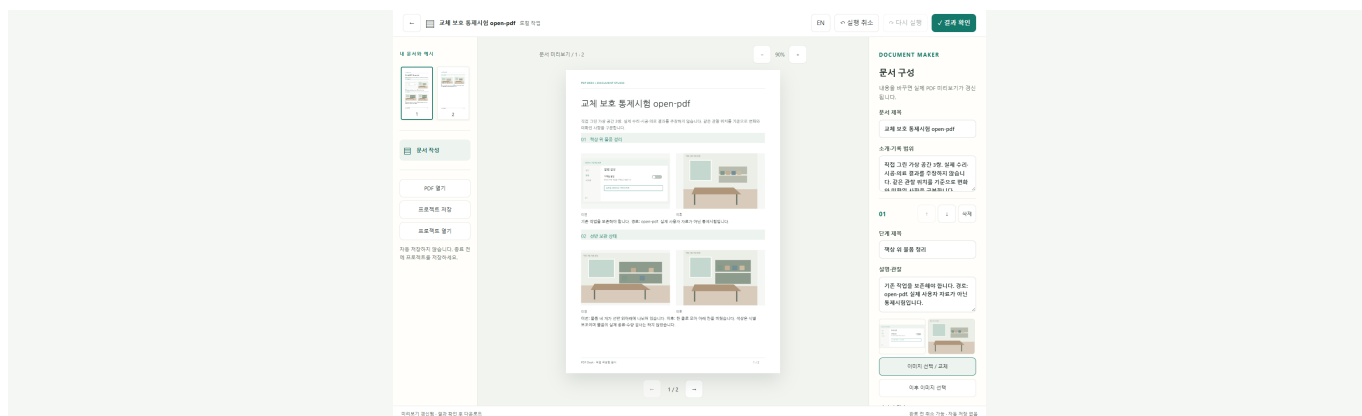

Expected

Before another file replaces the draft, choose whether to preserve it. Cancel should retain the title, caption, image and Undo.

Actual

Before: Open PDF, Open project and PDF drop each replaced the draft without a warning and disabled Undo. After: cancel preserved the work in all three paths, and explicit continuation opened the next document. This does not measure customer losses or incident rates.

01 Edit the title, caption and image without saving

Open the original photo-record example and change its title, first caption and first image. Do not save a project.

02 Before: another file replaces the draft

screenshot-ko.pdf 로컬 작업

The draft titled “교체 보호 통제시험 open-pdf” was replaced by screenshot-ko.pdf. This is a crop of the actual filename area. Absence of a warning and disabled Undo were recorded from runtime dialogs and state.

03 After: cancel the replacement confirmation

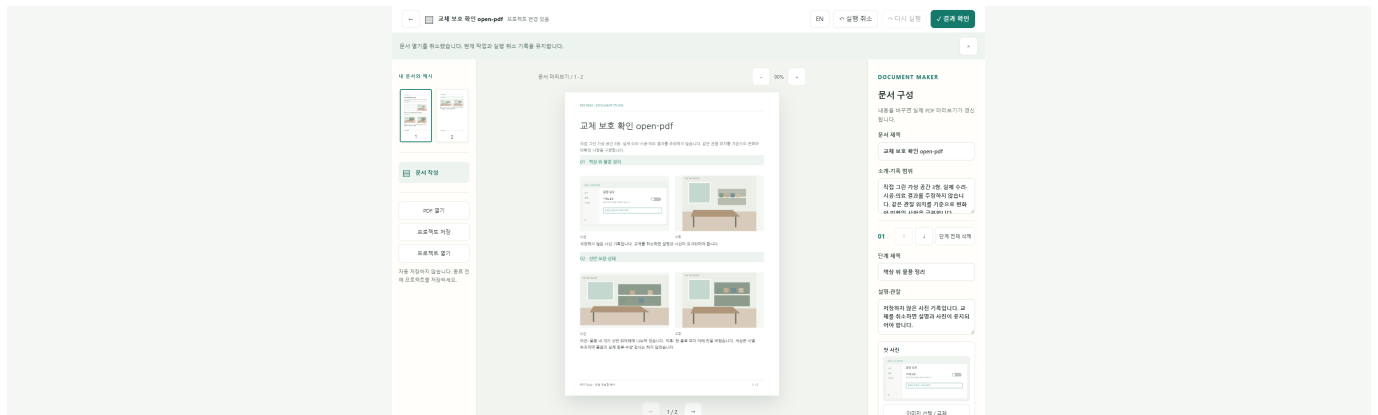

프로젝트 저장

저장하지 않고 계속

취소

This is a crop of the actual confirmation controls: Save project / Continue without saving / Cancel. Cancel retained the title, caption, image and Undo history. The complete confirmation is available in the public materials.

04 After: confirm the draft is preserved

After cancel, the title, caption, image and Undo history were checked. Save project offers a download without immediately discarding the draft. PDF and project serve different purposes; save them separately.
