

Complete a screenshot guide with PDF Desk

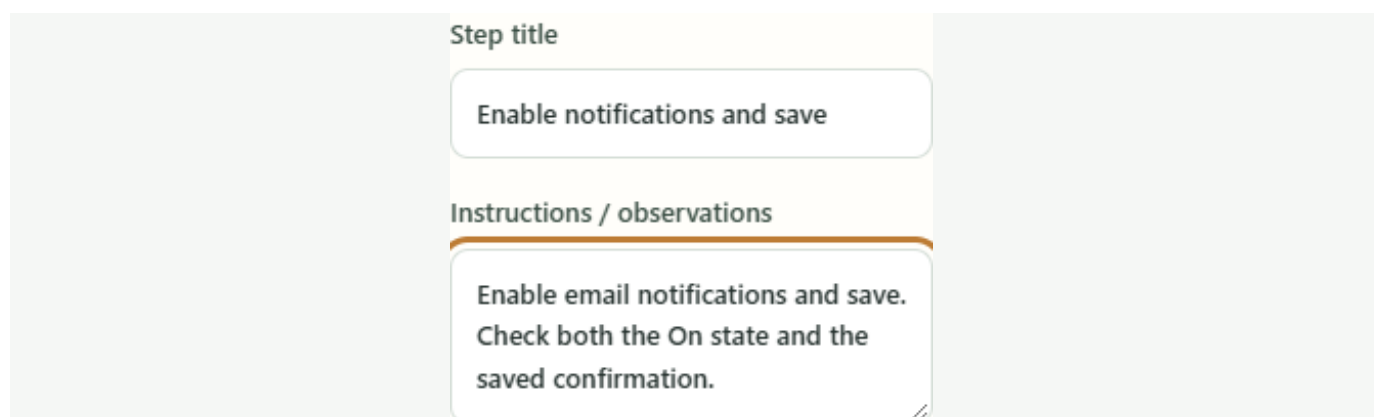

Follow actual PDF Desk workbench captures: replace an image, enter instructions, reorder and review/save. The Mora artwork is a fictional teaching example.

01 Choose / replace image

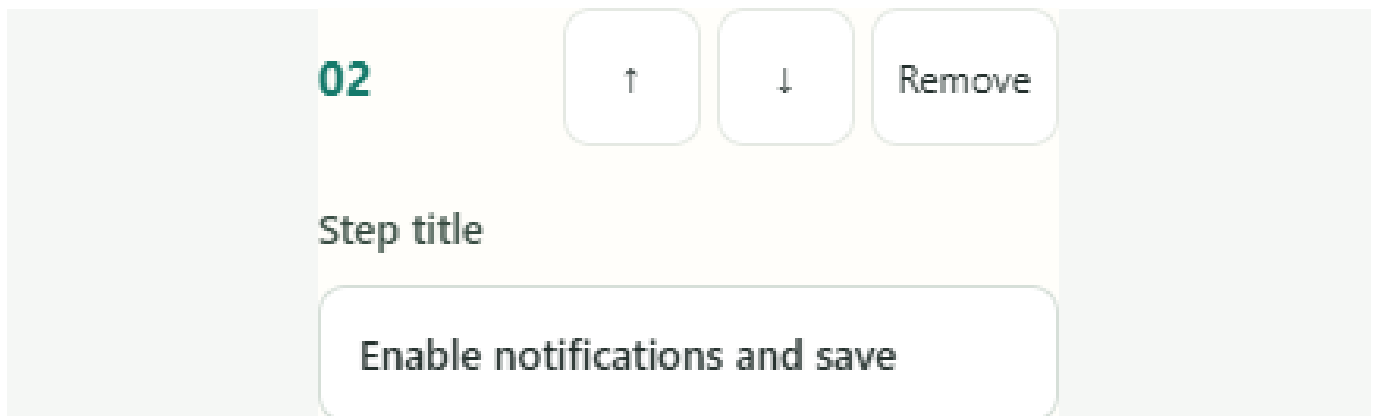

In the workbench, choose Choose / replace image and select your PNG or JPEG. This is the actual PDF Desk replacing an original fictional Mora screen. Operating-system file pickers vary.

02 Enter Step title and Instructions / observations

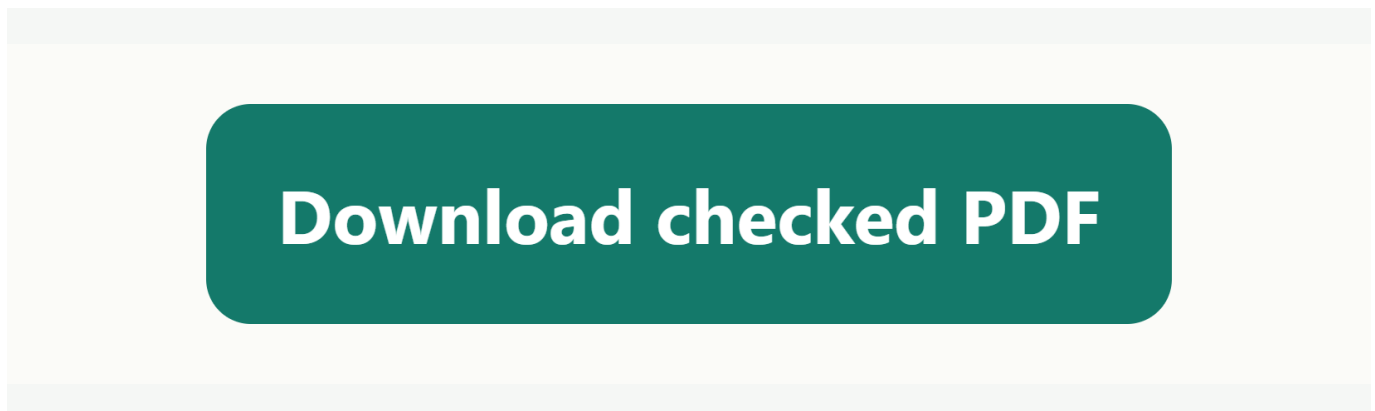

Use an action as the Step title and a completion check in Instructions / observations. This example asks the reader to check both On and the saved confirmation.

03 Reorder with ↑ and ↓

The ↓ button moves this step down by one position. Check the 02 label and title to confirm the image and caption moved together. The ↑ button moves it in the opposite direction.

04 Review output → Download checked PDF

Choose Review output at the top and inspect every output page. Choose Download checked PDF. Return to editing and choose Save project to retain an editable copy.
