

Note title does not persist

Writing exercise for a fictional notes app; not a claim of an observed outage or an executed reproduction test.

Environment

Fictional app / new note / OS, browser, version, occurrence time and frequency unverified

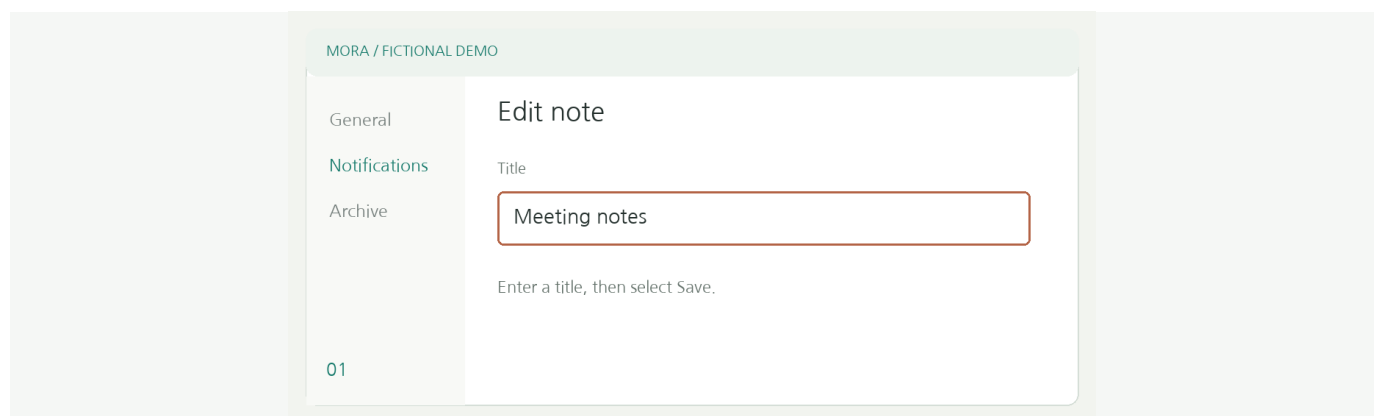

Expected

The saved title “Meeting notes” should remain after reopening.

Actual

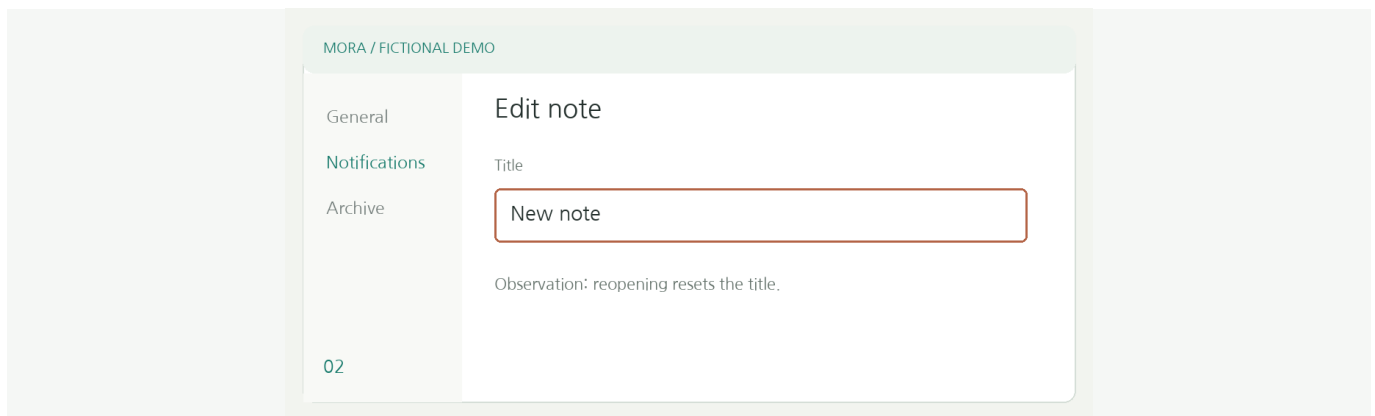

Scenario result: a saved message appears, but reopening resets the title to “New note”. Actual observation and cause are unverified.

01 Rename a new note

Create a new note and enter Meeting notes as its title. Leave the body unchanged.

02 Save and reopen

The screenshot shows a web application interface for 'MORA / FICTIONAL DEMO'. On the left is a sidebar with three menu items: 'General', 'Notifications' (highlighted in teal), and 'Archive'. Below these is a teal square icon with the number '02'. The main content area is titled 'Edit note'. It contains a 'Title' label above a text input field that has 'New note' entered and is outlined with a red border. Below the input field is a note: 'Observation: reopening resets the title.'

After the saved message, return to the list and reopen the same note. The title resets. A network-related cause has not been established.
